- There is no risk of getting an infection - You cannot contract AIDS or any other disease by donating blood. Equipment used is disposable & proper hygiene is maintained.
- A Healthy person has an average 6 litres of blood, out of which Blood volume taken at the time of donation is only 350 – 400 ml.
- Your body replaces the blood within 24 to 48 hours!
- Actual blood donation takes 5-10 minutes of your time – but the life you save is worth it.
- Above 18 years of age & over 45 kgs. weight can donate blood once in 3 months.

Why should you donate blood ?

- There is no other source of blood - it cannot be manufactured or produced. **Your donation will save a life.**
- **You don't lose anything;** but gain as donating blood is good for your body - reduces your risk of heart diseases and cancer.

Together, we can make a difference.
